FIG. 4

A schematic diagram of a rectangular device. The device is represented by a solid rectangular frame. Inside this frame, there is a dashed rectangular border. Within the dashed border, there is a grid of small circles. A vertical column of these circles, located on the right side of the grid, is filled with diagonal hatching. A double-headed arrow is positioned above the top edge of the device, indicating its width. Four labels with leader lines point to specific features: '3' points to a circle in the grid; '6' points to a hatched circle in the vertical column; '1' points to the solid outer frame; and '15' points to the dashed inner border. A label '16' is located below the device, pointing to the bottom edge of the solid frame.
